

COUMADIN CLINIC

Purpose:

The Coumadin Clinic is an outpatient service of HHC to coordinate management of your anticoagulation medication (COUDAMIN®). We ensure high quality care to our patients taking Coumadin by closely monitoring your blood results and providing education through our trained nursing staff.

Pre-test Prep:

Please bring a list of ALL your medications including dosage and frequency. Also, please bring in ANY over the counter medications (vitamins, herbs, etc.), that you may take.

If you have any questions, please contact Susan Collister, LPN at: (954) 987- 4230

Many patients use COUDAMIN® for the treatment or prevention of blood clot formation. Results are obtained through a simple fingerstick and the blood test results, known as an International Normalized Ratio (INR), are available immediately.

The Coumadin Clinic is staffed by nurses trained in anti-coagulation management. Our nurses work closely with your doctor to monitor your results on an ongoing basis.

The Coumadin Clinic is open Monday through Friday with appointments ranging from early morning until late afternoon. The visits are quick, and should last approximately 15 minutes. Frequency of office visits in the Coumadin Clinic range from once a week to once every six weeks once therapeutic results are achieved.

Your results:

The INR provides immediate results and COUDAMIN® dosage changes will be made at that time. Your physician will receive regular reports on your COUDAMIN® therapy.

Your test date is: _____

Your test time is: _____
